Siłownik Gazowy
Gas Spring
Gasdruckfeder

PL Gazowe sprężyny wymagają "rozruszania" przy pierwszym użyciu. Po zamontowaniu sprężyn gazowych, gdy stelaż będzie w górze, należy nacisnąć go mocno w dół, najlepiej z leżącym na nim materacem. Można również spróbować nacisnąć na jedną sprężynę gazową, a potem na drugą.

EN The gas springs require "breaking in" on the first use. After installing the gas springs, when the bed frame is in the raised position, press it firmly down, preferably with the mattress on it. You can also try pressing on one gas spring first, and then on the other.

DE Die Gasfedern müssen beim ersten Gebrauch „eingefahren“ werden. Nach dem Einbau der Gasfedern, wenn der Bettrahmen in der oberen Position ist, drücken Sie ihn fest nach unten, am besten mit der Matratze darauf. Sie können auch versuchen, zuerst Druck auf eine Gasfeder und dann auf die andere auszuüben.
